

PROTEIN BOOSTER

The Protein Booster range of dairy concentrate pellets is designed to be mixed with home-milled cereal grain. As the name suggests, their key role is to boost the protein content of the total grain mix, whilst also delivering the necessary vitamins, minerals and buffers. Protein Booster comes in a 1.5 kg dose and is basically your one-stop shop for protein and additives if you mill your own grain. The range offers 3 different protein levels to help match your requirements.

The daily dose rate of 1.5 kg per cow delivers,

10 MJ/kg DM Metabolisable Energy (ME)
15%, 23% or 30% Crude Protein (CP DM)
All-inclusive vitamins, minerals and buffers

Benefits/features

- Having the option of a 15%, 23% or 30% Crude Protein pellet allows you to match the Protein Booster to the forage/s that you have available. Eg. If you have high quality forage (lush ryegrass), Protein Booster 15% will be appropriate, whereas if you have mostly poor quality forage (rough pasture hay), Protein Booster 30% will really come into its own.
- Pelleting of vitamins, minerals and buffers ensures good mixing to ensure that each cow gets the right dose and there is no wastage of expensive and essential fine ingredients
- Weston Animal Nutrition are able to add any of the extras that you may wish to feed, to customise the ration to suit your needs.
- Protein Booster comes with full back-up from the Weston Animal Nutrition technical team. So, if you need more specific advice with on-farm balancing, then talk to your local Weston's representative.
